Recycling of Liquids from WP during PRP removal

Robert G. Courson, Acting Chief  
Superfund Branch

Jerry Schwartz  
Madeline Hawar

As we discussed by phone on July 2, I have obtained verbal commitments from Ray Boch, CWM, that they will recycle the three liquid classes you identified, i.e., the 3,650 gallons of "nonrecyclable" solvents, the 10,000 gallons of flammable liquids, and the synfuels. The commitment is conditioned subject to: 1. Characterization and contaminant analyses permit incineration at a licensed facility; and 2. That EPA sign the transport manifests for all wastes removed from Western Processing which do not go to a CWM owned facility.

Condition 2 (above) raises some policy, liability, and cost equity questions which we are exploring and will be getting back to you shortly.
